How to Print This Document on A4 Paper

These printables are made in US Letter size. They print perfectly on A4 too – just follow the steps below.

Choose "Fit"

The one thing to remember: when you print, choose **Fit** (it may be called **Fit to page**, **Fit to printable area** or **Scale to fit**). The page shrinks a tiny bit (about 97%) so **nothing gets cut off**, and everything still prints big and clear.

1 Adobe Acrobat Reader

1. Open the PDF and click **Print** (Ctrl+P / Cmd+P).
2. Choose your printer, then click **Page Setup** or **Properties** and set paper to **A4**.
3. Under **Page Sizing & Handling**, click **Fit**.
4. Uncheck **"Choose paper source by PDF page size"**.
5. Click **Print**.

2 Chrome or Edge browser

1. Open the PDF in your browser and click the **Print** icon.
2. Click **More settings**.
3. Set **Paper size** to **A4**.
4. Set **Scale** to **Fit to printable area** (or **Fit to page**).
5. Click **Print**.

3 Mac Preview

1. Open the PDF and choose **File** → **Print**.
2. Click **Show Details** if you only see a few options.
3. Set **Paper Size** to **A4**.
4. Choose **Scale to Fit** and select **Print Entire Image**.
5. Click **Print**.

4 iPhone, iPad & Android

1. Open the PDF, tap the **Share** icon (or the ⋮ menu) and choose **Print**.
2. Pick your printer and set the paper size to **A4**.
3. If you see a **Scale** or **Fit** option, choose **Fit**.
4. Tap **Print**.

Please avoid

- **"Actual size"** or **100%** – the left and right edges of the page may be cut off on A4 paper.
- **"Fill"** or **"Crop"** – these trim the edges of the page.
- Printing straight from a phone's preview without checking the paper size – it often defaults to Letter.

Quick check

Print **one page** first. If **nothing is cut off at the edges** – especially the **left and right sides** – your settings are right. Go ahead and print the rest of the pages.
